

PHOSTROL®

EFFECTIVE
FLEXIBLE
CONVENIENT

PHOSTROL FUNGICIDE

PHOSTROL is an extremely systemic and highly unique phosphite fungicide that has both a direct and indirect effect on harmful turfgrass diseases.

PHOSTROL is an effective, convenient and flexible tool for the management of Anthracnose and Pythium blight.

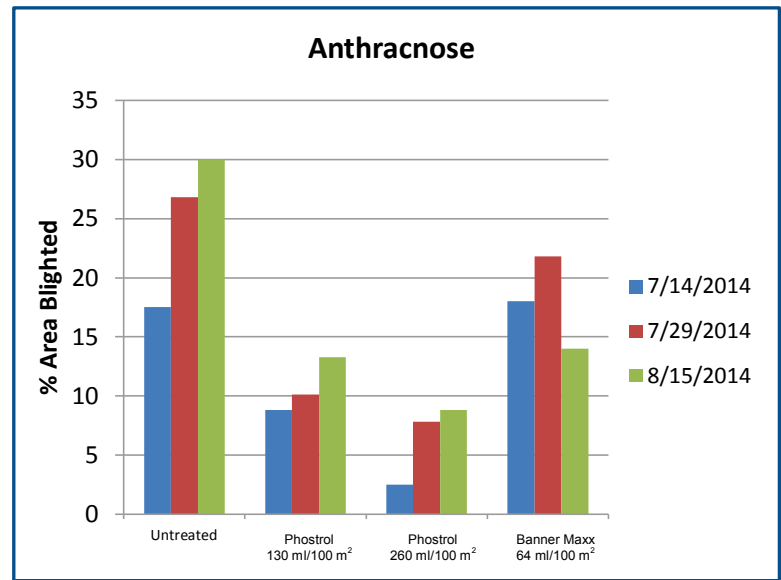

HIGHLY SYSTEMIC

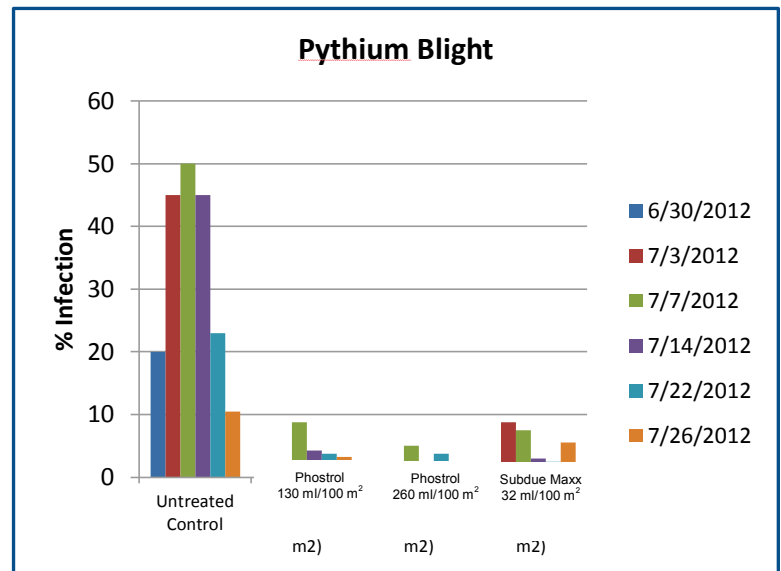

PHOSTROL is translocated through the xylem and phloem for complete plant protection.

EFFECTIVE PROTECTION

Vargas & Dykema - Michigan State University, 2012
14 Day interval – start June 19th Inoculated with *Pythium aphanidermatum*

Vargas & Dykema - Michigan State University, 2014
14 day interval – start June 23 Inoculated with *Colletotrichum cereale*

TECHNICAL INFORMATION

Active Ingredients: Mono and dibasic sodium, potassium and ammonium phosphites

Formulation: Liquid

Packaging & Coverage:

- Case of 2 x 10 L containers
- 1.5 to 0.75 ha (3.8 to 1.9 ac)
- 1000 Litre tote
- 77 to 38.5 ha (190 to 95 ac)

Two Modes of Action:

- Inhibition of oxidative phosphorylation
- SAR – stimulates the plant's natural defence response

FRAC Group: 33

Phostrol is a registered trademark of BELCHIM CROP PROTECTION CANADA

DIRECTIONS FOR USE ON TURFGRASS

Crop	Pest	Rate (ml / 100 m ²)	Comments
Turfgrass	Suppression of: <ul style="list-style-type: none"> ➢ Pythium blight ➢ Anthracnose 	130-260	Begin preventative foliar applications when conditions favouring disease development exist and continue on a 14 day interval if needed. Use 4 – 20 Litres of water / 100 m ²

Always read and follow label directions.
