KELPAK

KELPAK BIOSTIMULANT

Kelpak® is a natural biostimulant derived from the brown seaweed Ecklonia maxima, sustainably harvested from the cold Atlantic waters of Southern Africa. Using a proprietary Cellburst® extraction process, Kelpak preserves a unique blend of naturally occurring bioactive compounds that stimulate the plant's own growth processes. The product has been extensively researched and is used across a wide range of agricultural and horticultural crops to enhance root development, nutrient uptake, flowering, fruit set, and overall crop performance.

For Canadian fruit and vegetable production, Kelpak offers valuable benefits during crop establishment, flowering, fruit development, and periods of environmental stress. In crops such as apples, grapes, strawberries, blueberries, tomatoes, peppers, potatoes, onions, and leafy vegetables, Kelpak promotes stronger root systems that improve water and nutrient uptake, helping crops perform more consistently under drought, heat, salinity, and transplant stress conditions. It also supports pollen tube elongation, improved pollination, better fruit set and retention, enhanced fruit quality, firmness, and shelf life, leading to higher marketable yields. These benefits make Kelpak an effective tool for growers seeking to improve crop resilience, quality, and productivity while supporting sustainable production practices.

Active Ingredient:

Extract of seaweed Ecklonia maxima 34%

Key Crops:

All agricultural and horticultural crops

Key Targets:

Abiotic stress, drought, fruit shelf life, heat stress, pollination, root growth, salt stress

Group:

Biostimulant

Packaging Size:

2 x 10L

Belchim Canada
GROWING TOGETHER

CROP	RATE	ADDITIONAL INFORMATION
All Crops	Soil drench or in furrow: 1 - 4 L/ha	Shake well before use. Kelpak is applied in conjunction with standard fertilizer programs. The product can be blended with macro, secondary and micronutrients intended for soil or foliar application.
	Foliar: 1 - 4 L/ha	
	Seed treatment: 3 - 5 ml/kg of seed	
	Tank mixed: 0.5 - 4 L/ha	

Always read and follow the label. Trademark info
