

TOUGH

HERBICIDE

Product Overview

Tough Herbicide is a post-emergent broad-leaf herbicide for alfalfa (grown for seed), chickpeas, corn and mint.

Fast Activity

The active ingredient in Tough Herbicide inhibits photosynthesis in broad-leaf weeds, providing control in 7 to 10 days.

Alternative Mode of Action

With a group 6 mode of action, Tough is a unique option for hard to control weeds like kochia including group 2, 4 and 9 resistant bio-types.

Broad Spectrum

Kochia, lamb's-quarters, redroot pigweed, wild mustard and others

Active Ingredient:

Pyridate (Group 6)

Key Registered Crops:

Chickpeas, corn, mint, alfalfa (grown for seed). Also registered pre-planting for other pulses and canola.

Formulation:

600 gram/litre EC

Packaging Size:

2 x 9.46 L jugs per case

Rate:

Depends on target weeds, tank-mix partner and crop.
See rate table on page 2.

Timing and Rates

CROP	TIMING	RATE	TANK-MIX PARTNER
Alfalfa (for seed production)	Pre-emergence for new seeding. Up to 25 cm tall for established fields.	0.75 L/ha - 1.5 L/ha (0.3 L/ac - 0.6 L/ac)	None
Chickpea	Pre or post-emergence up to 9-node		Squadron @275 g/ha (110 g/ac) w/0.75 L/ha – 1 L/ha (0.3 L/ac – 0.4 L/ac) of Tough Herbicide. Add 0.5 % COC or MSO adjuvant
Corn	Post-emergent up to 8-leaf		Shieldex, Callisto, Armezon, Impact, Dicamba, Aatrex, Vios G3
Mint	Pre or post-emergence		None
Canola, lentil, dry pea	Pre-emergence only		None

Always read & follow label directions.

Technical Information

Key Weeds	Kochia, lamb's-quarters, wild mustard, waterhemp & more (see label).
Weed Stage	Apply when weeds are at 2 leaf stage.
Water Volume	Minimum 15 U.S. gallons per acre
Nozzles	Use spray nozzles that provide medium droplets for better coverage
PHI (days)	Alfalfa-seed production only, Chickpea-60, Mint-45, Field corn-100, Sweet corn-45
Re-entry Interval	2 hours

Another option for kochia with TOUGH HERBICIDE.
